

## Application of EMBIO® actinoPLUS

Safeguarding your oil palms is a straightforward endeavor with EMBIO® actinoPLUS (Streptomyces GanoSA1). Tailored for each stage of growth, our application methods ensure maximum protection

### General Application Guideline:

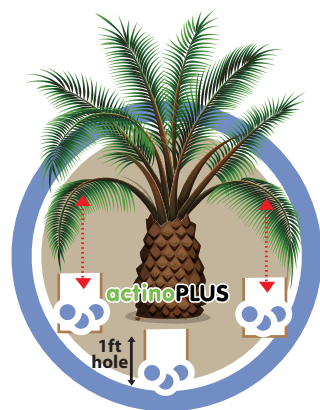

#### Nursery:

Apply three times at 3, 6, and 9 months, 50g each time, per seedling.

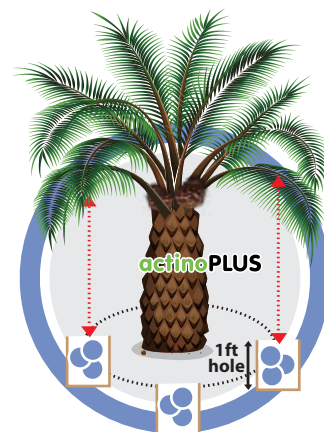

#### Planting Hole:

Use 250g per palm for a 10-12 months old seedlings.

#### Immature Palm: (≤6 Years)

Apply 300g per palm by digging three holes approximately 40cm from the palm trunk, distributing 100g per hole.

#### Mature Palm (>6 Years)

Administer 600g per palm, following the same three-hole method.

### Recommended Approach for Maximum Protection

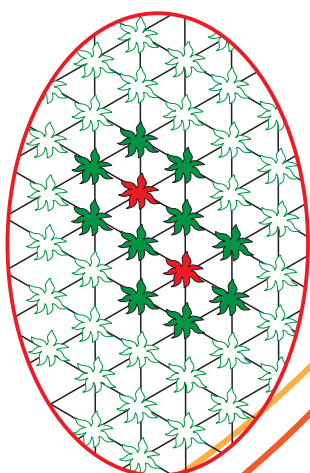

1) Holistic Protection Approach (a total of 10 times application along the life-cycle of each palm):

Age of Palm	Nursery <10mths	Planting Hole 10-12mths	3rd Year	6th Year	9th Year	12th Year	15th Year	18th Year	21st Year	23rd Year	Total
Dosage	150G	250G	300G	300G	600G	600G	600G	600G	600G	600G	4.6 KG

2) Shield Wall Approach (contain spread):

Apply 600g to each palm surrounding infected palm and remove infected palm via clean clearing method.

- Unprotected palms
- Palms protected by actionPLUS
- Diseased palms
